PERSONAL PROJECTS

Camper (09/2024 - 11/2024)

- For the frontend of the project i used React.js. I used MUI for components and icons, and Styled-components for styling. React Router handles navigation, React Modal is used for pop-ups, and React Slick with Responsive Carousel creates carousels. EmailJS was added for sending emails. The project is fully responsive.

Zoo Market (11/2024 - 01/2025)

- **Zoo Market** is a **full-stack web application** for selling people's pets and pet-related products. The **frontend** is built with **TypeScript**, **Styled-components**, **MUI**, **React Router**, **React Modal**, and **React Slick**, and it connects to the backend using **Axios**. The **backend** is powered by **Node.js**, **Express.js**, and **MongoDB**, with **Nodemailer** integrated for automated email sending.

Admin-Dashboard(Zoo Market) (01/2025 - 02/2025)

- **Admin Dashboard** – for managing the **Zoo Market** platform. Built with **TypeScript**, **Styled-components**, **MUI Material**, and **MUI Joy**. **Chart.js** and **react-chartjs-2** show information about products and users. **Axios** handles data requests, **react-router-dom** manages navigation, and **react-toastify** shows notifications. **JWT authentication** and **jspdf** help with security and creating reports.
